“The mission of the Stillman School of Business is to enrich each student’s life through an ethics-centered education focusing on transforming concepts into business practice.”

Course Description:
Dan Champeau and Chad Lewis, both with Fitch’s Global Project Finance, were interviewed and asked “what are the essential skills needed for your job?” They responded with a core understanding of sports franchises, league economics, and the relationship between the two; a strong financial background including the ability to analyze financial statements; financial modeling and forecasting; legal aspects of bond transactions; and understanding demographic elements in an area that could impact a transaction. (IJSF, Feb 2007)

This course will focus on understanding the way sport franchises are set up and how they relate to the economics of the league. We will also spend time looking at statistical modeling, and how it is applied to the sports industry, along with some time on demographic effects. This course applies financial and economic concepts in the sports industry. (The legal aspects can be learned in Sports Law and the ability to analyze financial statements can be acquired in Financial Statement Analysis) University Proficiency infused: Numeracy.

Text:  Required: ∙none  
Other useful (but not required) books:  
∙Dennis R. Howard and John L. Crompton, Financing Sport  
∙Michael Leeds and Peter von Allmen, The Economics of Sports  
∙Fried, Shapiro, and DeSchriver, Sport Finance  
∙Other optional reads: Moneyball, The Blind Side, Pay Dirt, Hard Ball

Academic and Professional Integrity:
‘All forms of dishonesty, whether by act or omission, including, but not limited to, cheating, plagiarism and knowingly furnishing false information to the University, are prohibited.’

All graded work must be your own (unless specified that working with others is acceptable). This includes all quizzes and exams. It is your responsibility to ensure that your behavior conforms fully to the spirit of the academic integrity statement. If you have any questions, do not hesitate to ask. Failing to do so will be taken seriously and result in a failure of the course. This will also be reported to the Dean.
Attendance:
Classroom attendance is highly encouraged. I will be in class on time, so the same is expected of you. In the rare event I am not, you are to give me 10 minutes (according to nist.time.gov). If I have not arrived by that time class is dismissed for the day. Also, please make sure to turn off all cell phones or other noise making devices during class.

Grading:
85% Exams: First (In-Term 1) 20%
Second (In-Term 2) 25%
FINAL EXAM 40%
15% Quizzes, Homework, In-class work, and Wiki: 15%
Total: 100%

Grading scale:
As an idea of what you might expect, I tentatively offer the following, assuming a 79 average: (There will be no credit given post final exam.)

92-100 A, 90-91 A-, 87-89 B+, 82-86 B, 80-81 B-, 77-79 C+, 72-76 C, 70-71 C-, 67-69 D+, 60-66 D, <60 F

I say ‘tentatively’ because all curving of grades will be done by shifting the grading scale rather than adding points. As an example, if an average is 68 the grading scale would be:

Make-up exams:
Make-ups for the in-term exams will be given only with a legitimate excuse. If you present an excuse for one in-term exam, its weight is shifted to the other exams, or a make-up test will be taken before the test date. The final is required, no final = no pass.

Grades Finalized
All grades completed during the semester are to be finalized by the last day of class. This means that after the last day of the course, grades received throughout the semester can no longer be changed. This also means that after this date no credit, other than the final exam, will be given.

Recordings
No one is permitted to record any part of this class without prior consent from the instructor. This includes photos, video recording, voice recordings, or any other form of recording. If permission is granted to record a portion of this course, it can only be used by the student in the course; it cannot be shared, posted, etc. for anyone else to use or see.

Quizzes, Homework, and In-class work:
There will be in-class and/or take-home homework and quizzes given throughout the semester. If it is a homework assignment you are working on, you may discuss ideas with people (including myself) and can turn in assignments with up to four names on them (all people will receive the same credit). You are allowed one missed quiz (the weight will be shifted to the other non-exam assignments). If you miss more than one quiz I reserve the right to give you a zero on one or all missed quizzes. All quizzes are to be done on your own; I will notify you before at least half of the quizzes I give. All work and quizzes will be given throughout the semester as the class material warrants. Late work will lose one point a minute until its value is zero.
Work & Skills
The course applies basic Economic and Finance principles to issues in sports. You will need a solid grasp of Business Finance (BFIN 2201) and principles of Economics I and II (ECON 1402 and 1403) to understand the material. A principles text may be useful to refresh your memory from time to time. Basic math skills will be applied in this course (addition, subtraction, multiplication, and division). Statistical concepts will also be introduced and used to analyze data from the world of sports, so a prior course in statistics is helpful but not required. A calculator may be used, however it cannot be shared (if you want to use one on a test, be sure to bring your own). Calculators must be a 4-function or business calculator; no graphing or cell phone calculators.

Important dates:
Last day to Add/Drop       Jan 25th
First Exam                 Feb 23rd
Withdraw date without consent Feb 24th
Withdraw date with consent  March 17th
Second Exam                April 18th
FINAL EXAM                 May 15th 12:20-2:20
